

Technical data sheet

Profile for removing the front panel

Reference: 2035.

Scope of application

The facade release profile is used as a starting profile without thermal bridges. The water drop profile prevents water from returning. Thanks to the grooves, the support in the insulation is better.

Technical specifications

Dimensions	2 m
Material	Rigid PVC - weft certified according to ETA
Packaging	25 pieces / carton.

Implementation of the project

The profile is inserted between the basement insulation and the façade insulation and the integrated grid will be coated with the façade grid. The profile has a negative angle, which results in a clamping effect when inserted.
