Specific part

1 Technical description of the product

1.1 General

This product is an ETICS (External Thermal Insulation Composite System) with rendering – a kit comprising components which are factory-produced by the manufacturer or component suppliers. The ETICS manufacturer is ultimately responsible for all components of the ETICS specified in this ETA.

The ETICS kit comprises a prefabricated insulation product of expanded polystyrene boards to be bonded or mechanically fixed onto a wall. The methods of fixing and the relevant components are specified in the table below. The insulation product is faced with a rendering system consisting of one or more layers (site applied), one of which contains reinforcement. The rendering is applied directly to the insulating panels, without any air gap or disconnecting layer.

The ETICS may include special fittings (e.g. base profiles, corner profiles ...) to treat details of ETICS (connections, apertures, corners, parapets, sills ...). Assessment and performance of these components is not addressed in this ETA, however the ETICS manufacturer is responsible for adequate compatibility and performance within the ETICS when the components are delivered as part of the kit.

2 Specification of the intended use(s) in accordance with the applicable European Assessment Document (hereinafter EAD)

2.1 Intended use

This ETICS is intended for use as external insulation of buildings' walls. The walls are made of masonry (bricks, blocks, stones ...) or concrete (cast on site or as prefabricated panels). The characteristics of the walls shall be verified prior to use of the ETICS, especially regarding conditions for reaction to fire classifications and for fixing of the ETICS either by bonding or mechanically. The ETICS is designed to give the wall to which it is applied satisfactory thermal insulation.

The ETICS is made of non load-bearing construction elements. It does not contribute directly to the stability of the wall on which it is installed, but it can contribute to durability by providing enhanced protection from the effect of weathering.

The ETICS can be used on new or existing (retrofit) vertical walls. It can also be used on horizontal or inclined surfaces which are not exposed to precipitation.

The ETICS is not intended to ensure the airtightness of the building structure.

The choice of the method of fixing depends on the characteristics of the substrate, which could need preparation and shall be done in accordance with the national instructions.

The provisions made in this European Technical Assessment (ETA) are based on an assumed intended working life of at least 25 years, provided that the conditions laid down in Clauses 4.2, 5.1 and 5.2 for the packaging, transport, storage and installation as well as appropriate use, maintenance and repair are met. The indications given as to the working life cannot be interpreted as a guarantee given by the manufacturer or the Technical Assessment Body, but should only be regarded as a means for choosing the appropriate products in relation to the expected economically reasonable working life of the works.

The ETICS belong to Category S/W2, according to EOTA Technical Report No. 034.

2.2 Manufacturing

The European Technical Assessment is issued for the ETICS on the basis of agreed data/information, deposited with the Technical Assessment Body "Building Testing and Research Institute", which identified the ETICS that has been assessed and judged. Changes to the ETICS or production process, which could result in this deposited data/information being incorrect, shall be notified to the Technical Assessment Body Technický a skúšobný ústav stavebný, n. o. (TSÚS) before the changes are introduced. The Technical Assessment Body Technický a skúšobný ústav stavebný, n. o. will decide whether or not such changes affect the ETA and consequently the validity of the CE marking on the basis of the ETA and if so whether further assessment or alternations to the ETA, shall be necessary.

2.3 Design and installation

The installation instructions including special installation techniques and provisions for the qualifications of the personnel are given in the manufacturer's technical documentation.

Design, installation and execution of ETICS are to be in conformity with national documents. Such documents and the level of their implementation in Member States' legislation are different.

2.4 Packaging, transport and storage

The information on packaging, transport and storage is given in the manufacturer's technical documentation. It is the responsibility of the manufacturer(s) to ensure that this information is made known to the concerned people.

2.5 Use, maintenance and repair

The finishing coat shall normally be maintained in order to fully preserve the ETICS performance. Maintenance includes at least:

- visual inspection of the ETICS;
- the repairing of localized damaged areas due to accidents;
- the aspect maintenance with products adapted and compatible with the ETICS (possibly after washing or ad hoc preparation).

Necessary repairs should be performed as soon as the need has been identified.

It is important to be able to carry out maintenance as far as possible using readily available products and equipment, without spoiling appearance. Only products which are compatible with the ETICS shall be used.

The information on use, maintenance and repair is given in the manufacturer's technical documentation. It is responsibility of the manufacturer(s) to ensure that these provisions are easily accessible to the concerned people.

3 Performance of the product and reference to the methods used for its assessment

3.0 The performances of the kit as described in this clause are valid provided that the components of the kit comply with Annexes 1 to 3.

3.1 Safety in case of fire (BWR 2)

3.1.1 Reaction to fire (EAD 040083-00-0404 – Clause 2.2.1.1, EN 13501-1)

The reaction to fire was determined according to EAD 040083-0404, Clause 2.2.1.1. The product as defined under Clause 1.1 reached the following classification valid for configuration stated in Tables 2a to Table 5.

For the SBI configuration this ETICS is mounted directly to a calcium silicate plasterboard substrate of reaction to fire classification A2-s1, d0 with a minimum density of $800 \text{ kg/m}^2 \pm 10 \text{ kg/m}^2$.

The installation of the ETICS was carried out by the manufacturer (holder of assessment) following the manufacturer 's specifications (instruction sheet) using a single layer of the glass fibre mesh all over the test specimen (no overlapping glass fibre mesh).

The test specimens were prefabricated and did not include any joints. The panel edges were rendered except the upper and bottom edges.

Anchors were not included in the tested ETICS as they have no influence on the test result.

Please note that in some member states the classification on the basis of SBI test is not accepted. Additional tests might be required e.g. large scale tests to demonstrate compliance with a member state's fire regulation.

Further the edges of the ETICS always have to be protected against fire.

NOTE A European reference fire scenario has not been laid down for facades. In some Member States, the classification of ETICS according to EN 13501-1 might not be sufficient for the use in facades. An additional assessment of ETICS according to national provisions (e.g. on the basis of a large scale test) might be necessary to comply with Member State regulations, until the existing European classification system has been completed.

3.2.3 Water absorption of the thermal insulation product (EAD 040083-00-0404 – Clause 2.2.5.2)

The maximum value of water absorption of thermal insulation covered by ETA is 0,1 kg/m² after 24 hours.

3.2.4 Water-tightness of the ETICS: Hygrothermal behaviour (EAD 040083-00-0404 – Clause 2.2.6)

Hygrothermal cycles have been performed on a rig. None of the following defects occurred during the testing:

- blistering or peeling of any finishing coat;

- failure or cracking associated with joints between insulation product boards or profiles fitted with ETICS;
- detachment of render coat;
- cracking allowing water penetration to the insulation layer (normally not bigger than 0,2 mm).

The ETICS is so assessed resistant to hygrothermal cycles, it means ETICS passed the test without defects.

3.2.5 Water-tightness of the ETICS: Freeze-thaw behaviour (EAD 040083-00-0404 – Clause 2.2.7)

- The ETICS is freeze-thaw resistant as the water absorption of all reinforced base coats and rendering systems are less than 0,5 kg/m² after 24 hours. Test for freeze-thaw behaviour has not been required.

3.2.6 Impact resistance (EAD 040083-00-0404 – Clause 2.2.8)

Performance is stated by level expressed by Category I, II or III. The resistance to hard body impacts (3 Joules and 10 Joules) for rendering systems leads to the following use categories (see Tables 14 to 20). Tests have been performed on small samples.

Diameter of the impact is no performance assessed.

The presence of any micro cracks or cracks, at the impact point and at the circumference is no performance assessed.

3.3.3 Bond strength between adhesive and the thermal insulation product (EAD 040083-00-0404 – Clause 2.2.11.3)

See performances in above Table 40.

The minimum bonded surface S , which shall exceed 20 %, is calculated as follows:
 $S (\%) = [0,03 \times 100]/B$

where:

B is minimum failure resistance of the adhesive to the insulation product in dry conditions for all failure modes expressed in MPa;

0,03 MPa corresponds to the minimum requirements.

The ETICS shall be installed on the substrate with application of the adhesive on the following minimal surface (% of total) according to Tables 41, 42 and 43.

Table 41 – Minimum admissible bonded surface area for bonded ETICS

Tensile strength perpendicular to the faces of the insulation product (Baumit ProTherm (100) and Baumit StarTherm (100))	Minimum admissible bonded surface area for bonded ETICS

3.4 Protection against noise (BWR 5)

3.4.1 Airborne sound insulation of ETICS (2.2.22.1 EAD 040083-00-0404)

No performance assessed.

3.4.2 Dynamic stiffness of the thermal insulation product (2.2.22.2 EAD 040083-00-0404)

No performance assessed.

3.4.3 Air flow resistance of the thermal insulation product (2.2.22.3 EAD 040083-00-0404)

No performance assessed.

3.5 Energy economy and heat retention (BWR 6)

3.5.1 Thermal resistance and thermal transmittance of ETICS (2.2.23 EAD 040083-00-0404)

The thermal transmittance of the substrate wall covered by the ETICS is **calculated** in accordance with the standard EN ISO 6946:

$$U_c = U + \chi_p \cdot n$$

- where $\chi_p \cdot n$ has only to be taken into account if it is greater than 0,04 W/(m².K);
- U_c global (corrected) thermal transmittance of the covered wall (W/(m².K));
- n number of anchors (through insulation product) per m²;
- χ_p local influence of thermal bridge caused by an anchor. The values listed below can be taken into account if not specified in the anchor's ETA:
- = 0,002 W/K for anchors with a stainless steel screw covered by plastic anchors and for anchors with an air gap at the head of the screw ($\chi_p \cdot n$ negligible for $n < 20$);
 - = 0,004 W/K for anchors with a galvanized steel screw with the head covered by a plastic material ($\chi_p \cdot n$ negligible for $n < 10$);
 - = negligible for anchors with plastic nails (reinforced or not with glass fibres ...);
- U thermal transmittance of the current part of the covered wall (excluding thermal bridges) (W/ (m².K)) determined as follows:

$$U_c = \frac{1}{R_i + R_{render} + R_{substrate} + R_{se} + R_{si}}$$

- where R_i thermal resistance of the insulation product (according to declaration in reference to EN 13163) in (m².K)/W;
- R_{render} thermal resistance of the render (about 0,02 in (m².K)/W or determined by test according to EN 12667 or EN 12664);
- $R_{substrate}$ thermal resistance of the substrate of the building (concrete, brick ...) in (m².K)/W;
- R_{se} external superficial thermal resistance in (m².K)/W;
- R_{si} internal superficial thermal resistance in (m².K)/W.

Thermal resistance of ETICS ($R_{ETICS} = R_i + R_{render}$) is $\geq 1,0$ (m².K)/W.

The value of thermal resistance of each insulation product shall be given in the manufacturer's documentation along with the possible range of thicknesses. In addition, the point thermal conductivity of anchors shall be given when anchors are used in the ETICS.

3.5.2 Thermal resistance of the thermal insulation product

(2.2.23.1 EAD 040083-00-0404)

The range value of thermal resistance of thermal insulation product is from 0,031 (m².K)/W to 0,038 (m².K)/W (comes from Declaration of performance issued for thermal insulations).

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied, with reference to its legal base

According to the European Commission Decision 97/556/EC amended by the European Commission Decision 2001/596/EC, the AVCP systems (further described in Annex V to Regulation (EU) No. 305/2011) 1 and 2+ apply.

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

In order to help the Notified Body to make an evaluation of conformity, the Technical Assessment Body issuing the ETA shall supply the information detailed below. This information together with the requirements given in EC Guidance Paper B will generally form the basis on which the factory production control (FPC) is assessed by the Notified Body.

This information shall initially be prepared or collected by the Technical Assessment Body and shall be agreed with the manufacturer. The following gives guidance on the type of information required:

1) The ETA

Where confidentiality of information is required, this ETA makes reference to the manufacturer's technical documentation which contains such information.

2) Basic manufacturing process

The basic manufacturing process is described in sufficient detail to support the proposed FPC methods.

The different components of ETICS are generally manufactured using conventional techniques. Any critical process or treatment of the components which affects performance are highlighted in the manufacturer's documentation.

3) Product and materials specifications

The manufacturer's documentation includes:

- detailed drawings (possibly including manufacturing tolerances);
- incoming (raw) materials specifications and declarations;
- references to European and/or international standards;
- technical data sheets.

4) Control Plan (as a part of FPC)

The manufacturer and the Technický a skúšobný ústav stavebný, n. o. have agreed a Control Plan which is deposited with the Technický a skúšobný ústav stavebný, n. o. in documentation which accompanies the ETA. The Control Plan specifies the type and frequency of checks/tests conducted during production and on the final product. This includes the checks conducted during manufacture on properties that cannot be inspected at a later stage and for checks on the final product.

Products not manufactured by the ETICS manufacturer shall also be tested according to the Control Plan. It must be demonstrated to the Notified Body that the FPC system contains elements securing that the ETICS manufacturer takes products conforming to the Control Plan from his supplier(s).

Where materials/components are not manufactured and tested by the supplier in accordance with agreed methods, then where appropriate they shall be subject to suitable checks/tests by the ETICS manufacturer before acceptance.

In cases where the provisions of the European Technical Assessment and its Control Plan are no longer fulfilled, the Notified Body shall withdraw the certificate and inform Technický a skúšobný ústav stavebný, n. o. without delay.
